

## Automatic Remediation

<https://campus.barracuda.com/doc/91987361/>

Barracuda Forensics & Incident Response can create and remediate certain incidents automatically, without your involvement. When the system detects a known threat, it moves matching emails from users' mailboxes into their junk folders. Then it sends an alert email to the security team. Automatic remediation is now available for user-reported emails that contain suspicious links and/or suspicious attachments. Additional capabilities for automatic remediation will be available soon.

For all other types of messages, create an incident manually. Refer to [Creating an Incident](#).

### Activating Automatic Remediation

Activate automatic remediation where you set other default options – on the **Incidents** page, click the settings  icon.

Refer to [Setting Default Remediation Options](#) for instructions.

### Viewing Automatic Remediation Information

On the **Incidents** page, incidents created through Automatic Remediation show **Automatic Remediation** in the **Created By** column.

On the **Incident Details** page, view the **Threats** tab for additional information.

For more information, refer to [Reviewing Incidents](#).
