

SafeSearch With Barracuda Content Shield

<https://campus.barracuda.com/doc/92766361/>

SafeSearch helps block explicit text, images, videos, and websites from Google, Yahoo, Bing, and YouTube search results. You can create a SafeSearch policy on a per-user basis, per group, or for *Everyone*.

Important Notes:

- If you enable SafeSearch for a user or group, then BCS intercepts SSL traffic in order to view the full URL, which can require additional processing resources on the endpoint machine. For this reason, make sure to *only enable SafeSearch for specific users*, not for entire groups – unless everyone in the group has a machine that can handle the additional resource usage.
- Rules you create on the **ADVANCED FILTERING** page are applied in the order in which they appear in the table. Each rule takes precedence over the rule(s) listed *below* that rule. For details and examples, see *How Rules Are Applied (Order of Precedence)* in [How to Configure Advanced Filtering Policies](#).

How to Enable SafeSearch

1. Go to the **ADVANCED FILTERING** page and, in the table, find the user or group (or *Everyone*) policy for which you want to enable SafeSearch.
2. Click the 3 dots () in the **More** column. Select **SafeSearch**. Or, to create a new policy, click the blue drop-down on the right of the screen, as shown below. Select **SafeSearch**, and then click the blue **SafeSearch** button.
3. In the SafeSearch pop-up window, toggle **SafeSearch** to *ON* and click **Save**.

The policy may take a few minutes to go into effect. You will see the *SafeSearch Active* text with a green checkmark icon in the **SafeSearch** column for the selected user/group in the table, as shown below. When a user for whom the SafeSearch policy is enabled searches for explicit content on any of the search engines listed here, the search results will be filtered and won't be displayed.

GROUP OR USER	SAFE SEARCH	MORE
👤 Markus Wheeler (1)		⋮
👥 Marketing (2)		⋮
👥 HR (3)	 SafeSearch Active	⋮

How to Disable SafeSearch

1. Go to the **ADVANCED FILTERING** page and, in the table, find the user or group (or *Everyone*) for which you want to disable SafeSearch.
2. Click the 3 dots (⋮) in the **More** column. Select **SafeSearchPolicy**.
3. In the SafeSearch pop-up window, toggle **SafeSearch** to *OFF* and click **Save**.

In the **SafeSearch** column in the table, no icon or text is shown for the selected user/group.
