

Allow List and Block List

<https://campus.barracuda.com/doc/93197312/>

The features formerly known as *whitelist* and *blocklist* have been renamed to *Allow List* and *Block List* in September, 2020. The action of putting a domain, subdomain, IP address or email address on an Allow List is referred to as *Allow Listing*. The action of putting a domain, subdomain, IP address or email address on a Block List is referred to as *Block Listing*.

- Messages that are allowed through the Barracuda Email Security Gateway because they meet the Allow List criteria mentioned above are not scored for spam, but are still checked for viruses. Allowed recipients can also have some messages blocked due to IP controls, and banned attachment checks for senders are still enforced.

Allowed and Allow Listed in the Message Log

The **Message Log** includes the column **Action** to indicate actions taken with messages, such as Allowed, Blocked, Deferred, Quarantined, Allow Listed, and more. Note that:

- *Allowed* simply means that the message did not get blocked by any filters. It does not mean that the message domain/subdomain, email address, or IP address is on the Allow List.
- *Allow Listed* means that the domain, email address, or IP address of the sender or recipient is on the Allow List. Those messages are not scored for spam but are still checked for viruses.

Log Display

Outbound Blocked Messages is true + OR
 Quarantined Messages is true -

Page More Actions

2020-09-04 1...					Allow Listed				unknown[4...
2020-09-04 1...					Blocked	Authentication ...			unknown[4...
2020-09-04 1...					Blocked	Authentication ...			unknown[4...

How to Create An Allow List or Block List

To make sure that emails to/from 'known' or 'trusted' domains or IP addresses are always allowed, use the BLOCK/ACCEPT pages, such as the **BLOCK/ACCEPT > Recipient Filters** page, for example, to create an **Allow List** of those domains, email addresses and/or IP addresses. The same is true for creating a Block List.
