How to Configure an Identity Provider

https://campus.barracuda.com/doc/93201532/

The CloudGen Access Console supports configuring SAML and OIDC as identity providers for enrolling devices. Barracuda Networks recommends OIDC for use with Google and Azure.

By default, all CloudGen Access tenants come configured with an email-backed internal identity provider. Google Workspace is also configured by default. This provider requires no configuration and will simply send an email to the configured user email address, with a secure link the user must click, as a form of authentication.
