Add Domains in Batch Mode

https://campus.barracuda.com/doc/93201586/

access-cli supports adding domains in batch mode, importing data from JSON or CSV files. This operation uses the common batch mode flags.

- JSON files should contain an array of objects, each containing the fields for each domain you wish to add.
- CSV files should be comma-separated. They must contain a header, specifying the fields and their order, followed by the records (one per line).

Fields

The expected fields for each format are as follows:

JSON Field Name	JSON Type	CSV Field Name	Example	Description	Mandatory
name	string	Name	example.com	Domain name	Yes
asset_source_id	string	AssetSourceID	d1662335-f4a7-4325-932a-0d0dfc7951f0	Asset Source ID	Yes
category	string	Category	domain	Must be domain	Yes

File Examples

Field order can be different from what is shown in the examples, and non-mandatory fields can be omitted. When using CSV, make sure to specify the correct field order in the header, and to maintain the order and number of fields consistent throughout each line.

Adding Domains

JSON

```
[
{
"name": "one.example.com", "category": "domain",
"asset_source_id": "f0968915-e227-404b-8ddb-9ac76b8b8be3"
},
{
```

```
"name": "another.example.com", "category": "domain",
"asset_source_id": "94173764-605f-4cd0-b34f-387439667569"
}
]
```

```
$ access-cli domains add --from-file=example.json
```

csv

```
Name,AssetSourceID,Category
one.example.com,f0968915-e227-404b-8ddb-9ac76b8b8be3,domain
another.example.com,94173764-605f-4cd0-b34f-387439667569,domain
```

```
$ access-cli domains add --from-file=example.csv --file-format=csv
```
