Avast Business Antivirus 21.1 and 21.2 — Barracuda RMM

https://campus.barracuda.com/doc/95260433/

This release contains both Avast Business Antivirus 21.1 and 21.2. See below for details.

A system reboot is required to complete the installation. There is no forced reboot unless you have set this in your device policy settings. Servers never reboot regardless of your device policy settings.

Avast Business Antivirus 21.1

Release Summary

This release contains new improvements and bug fixes to the Avast Business Antivirus client.

Improvements

- More informative threat alerts - If you get an alert, click 'See details' to see what type of threat it is (e.g., adware, ransomware, scam, etc.) and a brief description.
- Tidier threat alerts - If you ever run into multiple threats at once, you'll no longer be bombarded with one alert after another. Instead, we've combined these into a single alert according to the shield that detected them.
- Alert ID - Every threat alert now includes a unique ID in the bottom-left corner. If you ever share a screenshot with the Avast support team, this ID will help them to identify your problem.
- Improved PUP detections.
- Fixed rare crash of bccavsvc service.
- Fixed issues with antispam engine.
- Patched Sandbox escape method (along with silent updates to previous AV versions).
- Fixed some unwanted merging of old / default avast5.ini configuration.
- Fixed a rare bug that closed the UI when you changed the AV language.
- Silenced some background network scans in case they weren't required.
- Arranged for a more thorough uninstall (BugReport file is no longer left over).
- Implemented Remote Access Shield conflict warnings in Passive Mode.
- Fixed an issue where detection dialogs were stuck behind the main UI when opened.

Resolved issues

- Fixed rare crash of bccavsvc service.
- Fixed issues with antispam engine.
- Patched Sandbox escape method (along with silent updates to previous AV versions).
- Fixed some unwanted merging of old / default avast5.ini configuration.
- Fixed a rare bug that closed the UI when you changed the AV language.
- Silenced some background network scans in case they weren't required.

- Arranged for a more thorough uninstall (BugReport file is no longer left over).
- Implemented Remote Access Shield conflict warnings in Passive Mode.
- Fixed an issue where detection dialogs were stuck behind the main UI when opened.

Avast Business Antivirus 21.2

Release Summary

This release contains new improvements and bug fixes to the Avast Business Antivirus client.

Resolved issues

- AV DNS finally no longer conflicts with the VPN solution.
- Fixed product toasters that stole window's focus.
- Arranged for the proper order of dialogs in various alert-dialog flows (for reporting false positives, when the main UI is open, etc.).
- Fixed some rare cases where user settings weren't stored properly during product updates.
- Fixed rare problems with WebShield and HTTP/2 HPACK compression.
- Fixed an issue when automatic update did not run.
