

4-Week Security Awareness Training Curriculum

<https://campus.barracuda.com/doc/96015879/>

Use the curriculum materials on this page as a four-week training program for your organization – either during Cyber Security Awareness Month, observed each October, or during any four-week period that works for your organization. It's always a good time to develop your organization's Cyber Security Awareness!

SPAM | THE THREAT YOU LEAST EXPECT

What it is
Spam is any unsolicited email that arrives in your inbox.

Did you know
Spam accounts for more than half of the world's email traffic.

Why it works
Spammers know that even if just a few people respond to the millions of emails they send the numbers will add up in their favor.

Malicious spam
Cybercriminals use spam to target millions of inboxes with phishing emails. The links and attachments in these emails are always malicious.

Signs of malicious spam
Typos, a sense of urgency and offers that seem too good to be true are also signs that the spam is malicious.

Too good to be true?
Malicious spam often makes promises of rewards for responding that are too good to be true.

Overwhelming
Cybercriminals also use spam to overwhelm systems and create problems for users.

Report it
Report any malicious or suspicious spams to a manager, IT or Security.
