

# How to Configure User Authentication with Microsoft Entra ID

https://campus.barracuda.com/doc/96022972/

Important: If you are moving from LDAP to Microsoft Entra ID, you must delete all Email Gateway Defense users you created with LDAP before synchronizing to Microsoft Entra ID.

If you make setting changes, allow a few minutes for the changes to take effect.

See also: How to Restore LDAP or Microsoft Entra ID Directory Services

## Microsoft Entra ID (formerly Azure Active Directory)

Configure recipient verification with Microsoft Entra ID to allow end users to sign into Email Gateway Defense using their Microsoft Entra ID credentials. Once logged in, users can view their quarantine messages.

Note: If when setting up your Microsoft 365 Enterprise applications you set **Users can consent to apps accessing company data on their behalf** to **No**, users might not be able to log into Email Gateway Defense without administrator consent. To resolve this issue, reauthorize Microsoft Entra ID from the **Domain Settings** page in the web interface. See the *Microsoft Entra ID Authentication* section of <u>How to Restore LDAP or Microsoft Entra ID Directory Services</u> for step-by-step instructions on Microsoft Entra ID reauthorization.

## Single Sign-On

You can configure Single Sign-On (SSO) for a domain so that authenticated users can access all or a subset of the restricted resources by authenticating just once using their Microsoft Entra ID credentials. SSO is a mechanism where a single set of user credentials is used for authentication and authorization to access multiple applications across different web servers and platforms, without having to re-authenticate.

The SSO environment protects defined resources (websites and applications) by requiring the following steps before granting access:

• Authentication: Authentication verifies the identity of a user using login credentials.

• Authorization: Authorization applies permissions to determine if this user may access the requested resource.

#### Set Up Microsoft Entra ID Authorization

Complete the steps in this section for each domain you want to synchronize with your Microsoft Entra ID directory.

- 1. Log into <u>https://login.barracudanetworks.com/</u> using your account credentials, and click **Email Gateway Defense** in the left pane.
- 2. Click **Domains**, and click **Edit** in the **Settings** column for the desired domain.
- 3. In the **Domains > Domain Settings** page, scroll to the **Directory Services** section, and select **Azure AD**, and click **Save Changes** at the top of the page.
- 4. Scroll down to the Status section, and click Authorize.
- 5. The Authorize Azure AD dialog box displays. Click Continue.
- 6. When prompted, log into your Microsoft 365 account as a global administrator.
- 7. In the **Authorization** page, click **Accept** to authorize Email Gateway Defense to connect to your Microsoft Entra ID directory.
- 8. In the **Domain Settings** page, the **Status** field displays as **Active**; the **Authorized Account** and **Authorization Date** display below the status:

Directory Services	
You can use either Azure AD or L	DAP directory services to enable single sign on and synchronization of users lists.
Туре	💿 LDAP 💿 Azure AD 💿 None
Status	Active (Revoke Authorization) Authorized Account: organizationname.info Authorization Date: 3/28/2018, 11:44:24 AM

9. In the Synchronization Options section, select Synchronize Automatically. When selected, Email Gateway Defense automatically synchronizes with your Microsoft Entra ID directory daily and adds/updates your users. Note that the sync can take up to 24 hours or longer. If you encounter sync issues, such as new users not being properly synced between your Microsoft Entra ID directory and Email Gateway Defense user list, click Sync Now to manually synchronize Email Gateway Defense with your Microsoft Entra directory.

If you select **Manual**, you must click **Sync Now** to synchronize Email Gateway Defense with your Microsoft Entra ID directory and add/update users.

**Note** that selecting **Sync Now** may take longer than anticipated due to possible timeout errors.

- 10. To use SSO, click **Yes** for **Enable Single Sign On**. Once enabled, users are prompted to log into their Microsoft 365 account when accessing their messages in Email Gateway Defense.
- 11. To use the **Test Azure AD Configuration Settings** section, enter a valid email address in the **Testing Email Address** field to test your Microsoft Entra ID settings.
- 12. Click **Test Settings**.

You can use either Azure AD or LDAP di	rectory services to enable single sign on and synchronization of users lists.
Туре	LDAP  Azure AD  None
Status	Active (Revoke Authorization)
	Authorized Account:
	Authorization Date: 3/13/2020, 3:51:37 PM
Directory Options	
Synchronization Options	Synchronize Automatically     Manual    Sync Now    Sync finished at 3/13/2020
Enable Single Sign On	Yes No
Test Azure AD Configuration Settin	ngs
Testing Email Address:	
	For testing Azure AD settings only. Enter a valid primary email address.
	Tast Sattings

13. Click **Save** at the top of the page to save your settings and return to the **Domains** page.

If you previously set up LDAP authentication with Email Gateway Defense, your settings are not lost when you select **Azure AD** for a selected domain. Note, however, turning off Microsoft Entra ID disables SSO and new users are not synchronized but recipient verification continues to function. For more information, see <u>How to Restore LDAP or Microsoft Entra ID Directory</u> <u>Services</u>.
