Regional Policies

https://campus.barracuda.com/doc/96023019/

You can select to **Block** or **Quarantine** messages based on country of origin or language on the **Inbound Settings > Regional Policies** page, allowing you to reduce unwanted Inbound emails. Note that these settings apply to all domains you have verified in Email Gateway Defense for processing email, unless you change these settings for a specific domain. In that case, the domain-level settings override the global system settings.

Once you select a country from the drop-down menu and click **Add**, the ISO code for the selected country displays in the table. For a complete list of country codes, see Country Codes List.

When bulk editing countries for regional policies, use the ISO 3166 alpha 3 code. See the ISO Online Browsing Platform (OBP): https://www.iso.org/obp/ui/#search

See http://a4esl.org/c/charset.html for a list of widely used language character sets.

Exempt Sender Policies

You can exempt specific sender email addresses/domains and IP addresses from a country that you currently have as blocked or quarantined. Mail from these senders are still scanned for spam and viruses.

1. Go to the **Inbound Settings > Regional Policies** page.
2. Use one or both of the following:
   - **GeoIP Exemptions by Email Address/Domains** – Enter the **Email Address/Domain** and optional **Comment**.
   - **GeoIP Exemptions by Sender IP Address** – Enter the sender **IP Address**, **Netmask**, and optional **Comment**.

   Alternatively, use the **Bulk Edit** button.

   Note that the maximum number of entries that can be added for this policy is 2500.
3. Click **Add** in the Actions column, and click **Save Changes**.
