Google Workspace Deployment

https://campus.barracuda.com/doc/96023084/

To deploy Email Gateway Defense with Google Workspace, you must have a Google Workspace Basic, Business, or Enterprise account. The G Suite legacy free edition is no longer available and is missing key features required for this deployment. For details on upgrading your Google Workspace subscription, refer to the Google Support article Upgrade from G Suite legacy free edition.

Email Gateway Defense provides:

- Critical multi-layer security and compliance for Google Workspace;
- Effective protection against spam and phishing emails;
- Threat detection and message blocking;
- Full functionality free for 14 days.

Specify Email Gateway Defense as an *inbound mail gateway* so that Email Gateway Defense filters out spam and viruses, and then passes the mail on to Google Workspace.

Specify Email Gateway Defense as the *outbound mail gateway* so that Email Gateway Defense processes the mail by filtering out spam and viruses before final delivery.

Advanced Threat Protection protects against advanced malware, zero-day exploits, and targeted attacks not detected by Email Gateway Defense virus scanning features.

Where to Start

- Step 1 - Set Up Email Gateway Defense for Google Workspace
- Step 2 - Configure Google Workspace for Inbound and Outbound Mail
