

How to Configure DHCP IP Address Reservations

<https://campus.barracuda.com/doc/96026070/>

To reserve the same IP address for known DHCP clients, configure IP address reservations using MAC-to-IP-address mapping. IP address reservations are configurable in the simple and advanced DHCP service setup. DHCP reservations must reside outside of the DHCP range.

Before You Begin

- Configure the DHCP service. For more information, see [How to Configure the DHCP Service](#).
- (optional) Configure advanced DHCP subnets and address pools. For more information, see [Advanced DHCP Settings](#).
- Identify the IP addresses to be mapped to your client's MAC addresses. The MAC address of a client can be found on the **DHCP** tab in the **Hardware-Address** column:

Name	IP-Address	Start	End	Relay-ID	Hardware-Address	Hardware-Type
IPv6MGMT: Pool	1 of 11 Leases - 9.1% used	10.2.0.10	10.2.0.20			
raspberrypi	10.2.0.10	15.11.2016 07:10:22	15.11.2016 19:10:22		b8:27:eb:04:d7:48	ethernet

Configure IP Address Reservations for Simple DHCP Setup

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > DHCP > DHCP Enterprise Configuration**.
2. In the left menu, select **Operational Setup IPv4**.
3. In the left menu, expand the **Configuration Mode** and click **Switch to Advanced View**.
4. Click **Lock**.
5. In the **Subnets** table, open the DHCP subnet configuration. The **Subnet** window opens.
6. In the **Reservations** table, click + and add the client.

7. (optional) Specify a **Name** for the IP address reservation and click **OK**.
8. Enter the **Reserved IP** for the client.

9. (optional) Enter the **DHCP Client Identifier** that identifies the host client when requesting an IP address.
10. Enter the **MAC Address** of the client.

Reserved IP	<input type="text" value="10.2.0.10"/>	 
DHCP Client Identifier	<input type="text"/>	
MAC Address	<input type="text" value="b8:27:eb:04:d7:48"/>	

11. Click **OK**.
12. Click **OK**.
13. Click **Send Changes** and **Activate**.

Configure IP Address Reservations for Advanced DHCP Setup

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > DHCP > DHCP Enterprise Configuration**.
2. In the left menu, expand the **Configuration Mode** section, and click **Switch to Advanced View**.
3. In the left menu, select **Operational Setup IPv4** or **6**.
4. Click **Lock**.
5. Enable **Use Advanced Pool Configuration** and configure DHCP subnets and address pools. For more information, see [How to Configure DHCP Subnets and Address Pools](#).

Address Pool Configuration	
Enable DHCPv4	<input checked="" type="checkbox"/> yes 
Use Advanced Pool Configuration	<input checked="" type="checkbox"/> yes 
Subnets      	

6. In the left menu, select **Known Clients**.
7. In the **Client Groups** table, edit your client group, or click **+** and add client group members. For more information, see [How to Configure Known Clients](#).
8. In the **Clients** table, click **+** and add the client that should have a fixed IP address assigned.

Client Group Members

Clients

Name	Description	DHCP Client Identifier
------	-------------	------------------------

Clients

Name

OK... Cancel

9. Enter a **Name** for the client and click **OK**. The **Clients** window opens.
10. (optional) Enter the **DHCP Client Identifier** that identifies the host client when requesting an IP address.
11. Enter the **MAC Address** of the client.
12. From the **MAC Type** list, select the type of network card requesting a lease.
13. In the **Fixed IP Addresses** field, enter the static IP address(es) that are assigned to the client.

Client Match & Address Assignment

DHCP Client Identifier

MAC Address ☒ b8:34:ed:04:d3:22

MAC Type ethernet

Fixed IP Addresses ☒ 10.2.0.20

14. Click **OK**.
15. Click **OK**.
16. Click **Send Changes** and **Activate**.
