

VPN Settings

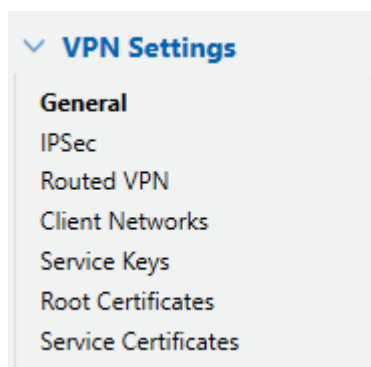

<https://campus.barracuda.com/doc/96026075/>

The VPN server can handle protected connections in various ways. Each connection type is characterized by special properties that, in turn, depend on numerous settings.

Accessing VPN Settings

The settings can be accessed in Firewall Admin in the following two ways:

- On single boxes through the path **CONFIGURATION > Configuration Tree > Box > Assigned Services > VPN > VPN Settings**.
- On managed boxes through the path **CONFIGURATION > Configuration Tree > Multi Range > your range > your cluster > Box > Assigned Services > VPN > VPN Settings**.

VPN Settings

The left navigation bar contains the following options:

General

This option contains sections for configuring settings for the VPN base service, usage of the TINA tunneling protocol, and the Access Control Service.

For more information, see [General Settings](#).

IPSec

For more information, see [IPsec Settings](#).

Routed VPN

For more information, see [Routed VPN Settings](#).

Client Networks

For more information, see [Client Networks Settings](#).

Service Keys

For more information, see [Service Keys Settings](#).

Root Certificates

For more information, see [Root Certificates Settings](#).

Service Certificates

For more information, see [Service Certificates Settings](#).
