

# How to Configure VPN Group Policies in the SSL VPN

#### https://campus.barracuda.com/doc/96026104/

By adding group-policy-based VPN group policies to your CloudGen Firewall SSL VPN resources, you can let end users self-provision the VPN clients on their Windows, macOS, or iOS devices. Users then only need to log into their desktop or mobile portal and click the provisioning link. By default, the VPN group policy uses session and user attributes for single sign-on. The downloaded file automatically configures the Barracuda VPN client or iOS VPN client, depending on the operating system. Currently, VPN files containing personal license files (\*.lic) cannot be uploaded.

#### **Before You Begin**

- Configure a Client-to-Site VPN group policy. For more information, see <u>Client-to-Site VPN</u>.
- (macOS X and Windows only) Install the Barracuda VPN Client. For more information, see Installing the Barracuda Network Access/VPN Client for Windows.

#### Step 1. Export the Client-to-Site VPN Group Policy

Download the VPN group policy (\*.vpn) file from the Client-to-Site configuration.

- 1. Go to CONFIGURATION > Configuration Tree > Box > Assigned Services > VPN-Service > Client-to-Site.
- 2. Click the **External CA** tab.
- 3. In the **Group Policy** tab, double-click on the VPN group policy. The **Edit Group Policy** window opens.

🔂 Clie	ent to Site - VPI	V (vpn)				
Barracuda V	/PN CA External C	A Message	es   Pictures   矿 Re	gistry 🛛 😅 VPN FW	📑 Offline FW	
	Rules Policy	Common	Barracuda   IPSec	Hide Advanced	l Configuration	
Disabled	Name	Secure	Network	Routes	External Group	Client
No	TESTVPN	No	192.168.14.1+dyn	10.0.10.0/25	•	=

4. Click Export to file. The Export VPN Profile window opens.

8. Save the file.

### Step 2. Create a VPN Group Policy Resource

- 1. Go to CONFIGURATION > Configuration Tree > Box > Assigned Services > VPN-Service > SSL-VPN .
- 2. In the left menu, select VPN Group Policy.
- 3. Click **Lock**.
- 4. Click + to add a new VPN Group Policy.
- 5. Enter a Name and click OK. The VPN Group Policy window opens.
- 6. Enter the **Display Name**.
- 7. (optional) To restrict access to the VPN files by user group, replace the \* entry in the **Allowed User Groups** list. Click + to add new user groups.
- 8. Click **Ex/Import** and select **Import from File**.
- 9. Select the VPN group policy file you exported in step 1.
- 10. (SSO only) Enter a session or user attribute for the **Username** and **Password**. For more information, see <u>How to Use and Create Attributes</u>.

- 11. Click **Open**.
- 12. Click **OK**.
- 13. Click Send Changes and Activate.

### **VPN Self-Provisioning**

To configure the VPN clients on their desktop or iOS device, users can access the VPN group policies through either the SSL VPN web portals or CudaLaunch. Clicking on the VPN group policy resource adds the policy to the VPN client installed on the device. For CudaLaunch on mobile devices, the VPN connection is fully managed by the app, including updating the VPN profile if the VPN file attached to the group policy in the SSL VPN is changed. For Windows and macOS devices, the VPN connection for the Barracuda VPN Client can be downloaded directly from CudaLaunch or the web portal, but VPN configuration changes are not synced.

- <u>CudaLaunch</u>
- <u>Self-Service VPN Provisioning for iOS Devices</u>
- <u>Self-Service VPN Provisioning on Microsoft Windows</u>
- <u>Self-Service VPN Provisioning on macOS</u>
