SSL VPN VPN Apps

https://campus.barracuda.com/doc/96026115/

Some web applications are difficult or impossible to configure using SSL VPN web apps. In such cases, use VPN Apps, instead, to allow users to access the web applications over a client-to-site VPN. VPN apps automatically trigger a client-to-site VPN connection. After the connection is established, launch the resource in the default browser. VPN Apps are available for CudaLaunch for Windows, iOS, and Android.

VPN Apps for SSL VPN

Before configuring the VPN App, a client-to-site VPN group policy must be configured in the VPN service, and the VPN policy file must be imported as a VPN group policy in the SSL VPN service. In addition to the client-to-site VPN, the admin must allow traffic from the client-to-site VPN to the services required by the VPN App.

For more information, see How to Configure SSL VPN VPN Apps.
