

How to Configure Botnet and Spyware Protection for Web Traffic

<https://campus.barracuda.com/doc/96026190/>

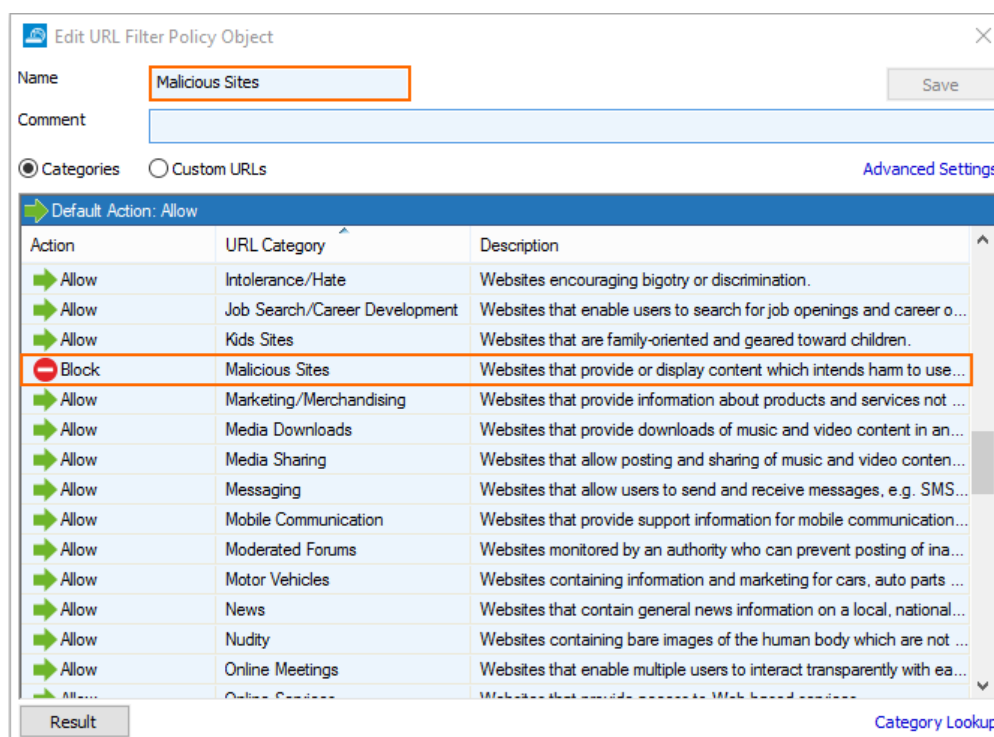

If you are not using a DNS sinkhole you can configure the URL filtering in the firewall to achieve similar results for HTTP and HTTPS traffic. This allows you to restrict access to malicious websites that may compromise the security of your client. The **Malicious Sites** URL category also uses the spyware and botnet database. Create a URL Filter policy object blocking access to websites in the **Malicious Sites** category and use it in the application rule matching your web traffic. When access to a malicious site is detected, the user is redirected to a custom block page. A valid Energize Updates subscription is required.

Before You Begin

- (optional) Configure an outbound TLS Inspection policy. To use TLS Inspection the **Feature Level** of the Forwarding Firewall must be set to **7.2** or higher. For more information, see [TLS Inspection in the Firewall](#) and [How to Configure Outbound TLS Inspection](#).

Step 1. Create a URL Filter Policy Object

Create a URL Filter policy object and set the **Action** for **Malicious Sites** category to **Block**.

Edit URL Filter Policy Object

Name: Save

Comment:

☒ Categories ☐ Custom URLs [Advanced Settings](#)

Default Action: Allow

Result [Category Lookup](#)

For more information, see [How to Create a URL Filter Policy Object](#).

Step 2. Enable URL Categorization

You must enable the URL Filter to be able to process URL categorization requests. To change additional settings for the URL Filter service, see the **Application Detection** section in [General Firewall Configuration](#).

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > Firewall > Security Policy**.
2. Click **Lock**
3. In the **URL Filter** section, click **Enable URL Filter in the Firewall**.

URL Filter

☒ Enable URL Filter in the Firewall

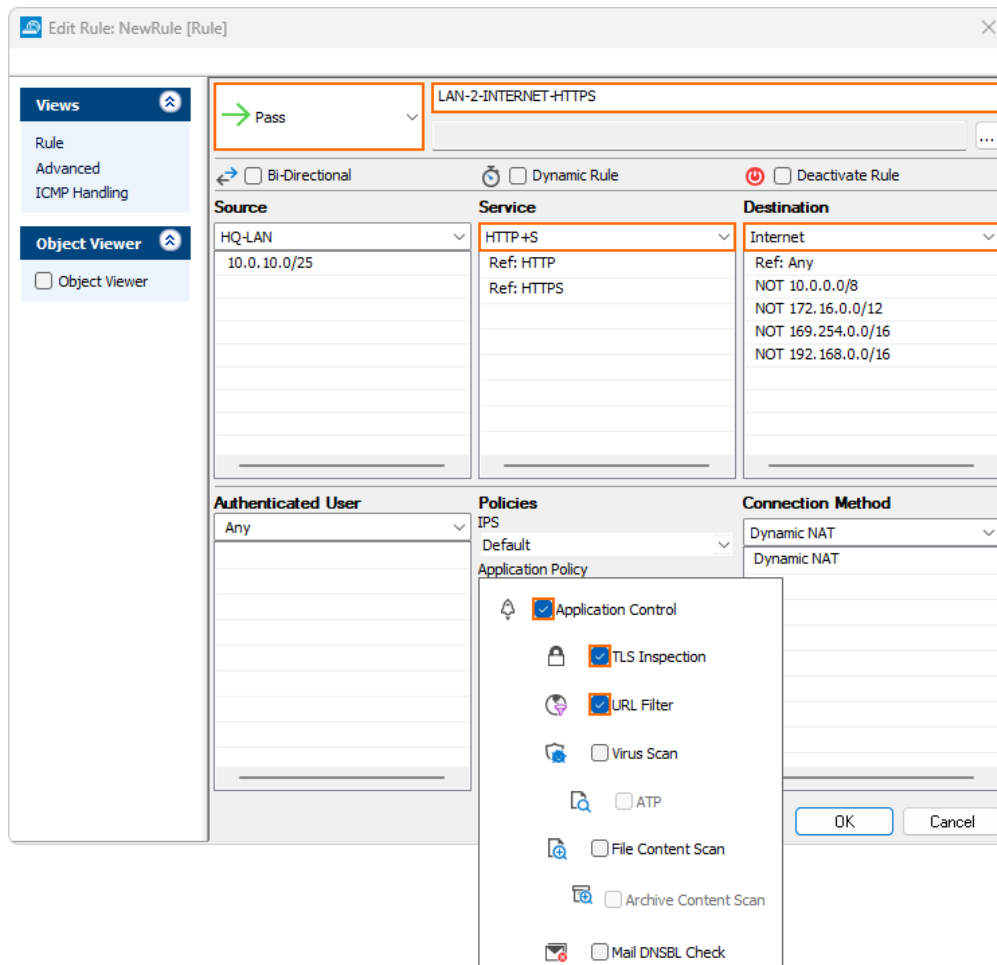

4. Click **Send Changes** and **Activate**.

The Barracuda URL Filter is now enabled and can handle URL categorization requests.

Step 3. Enable the URL Filter for the Access Rule Handling Web Traffic

Enable Application Control, SSL Inspection, and URL Filter for the access rule matching web traffic.

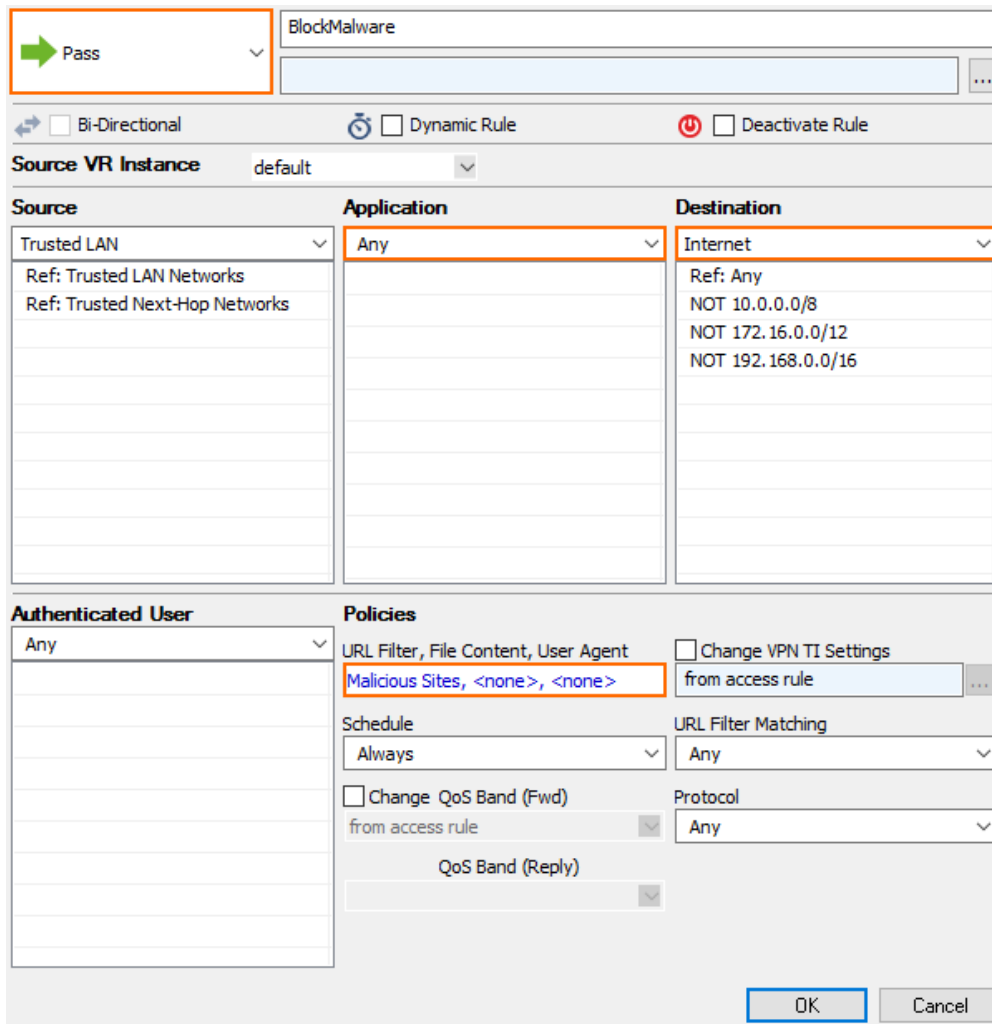

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > Firewall > Forwarding Rules**.
2. Double-click to edit the access rule matching HTTP and HTTPS traffic.
3. Click on the **Application Policy** link and select:
 - **Application Control** – required.
 - **TLS Inspection** – recommended.
 - **URL Filter** – required.

4. Select a policy from the **TLS Inspection Policy** drop-down list.
5. Click **OK**.
6. Click **Send Changes** and **Activate**.

Step 4. Create an Application Rule using URL Filter Objects

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > Firewall > Forwarding Rules**.
2. In the left menu, click **Application Rules**.
3. Click **Lock**.
4. Create a **Pass** application rule. For more information, see [How to Create an Application Rule](#).
 - **Source** – Select the same source used in the matching access rule.
 - **Application** – Select **Any** to use only the web filtering. Otherwise, select an application object from the drop-down list to combine application control and URL filtering.
 - **Destination** – Select **Internet**.
5. Click the **URL Filter, File Content, User Agent** link.
6. Click **URL Filter**.
7. Click the URL Filter policy object created in step 1.

BlockMalware

Pass

☐ Bi-Directional ☐ Dynamic Rule ☐ Deactivate Rule

Source VR Instance default

Source	Application	Destination
Trusted LAN Ref: Trusted LAN Networks Ref: Trusted Next-Hop Networks	Any	Internet Ref: Any NOT 10.0.0.0/8 NOT 172.16.0.0/12 NOT 192.168.0.0/16

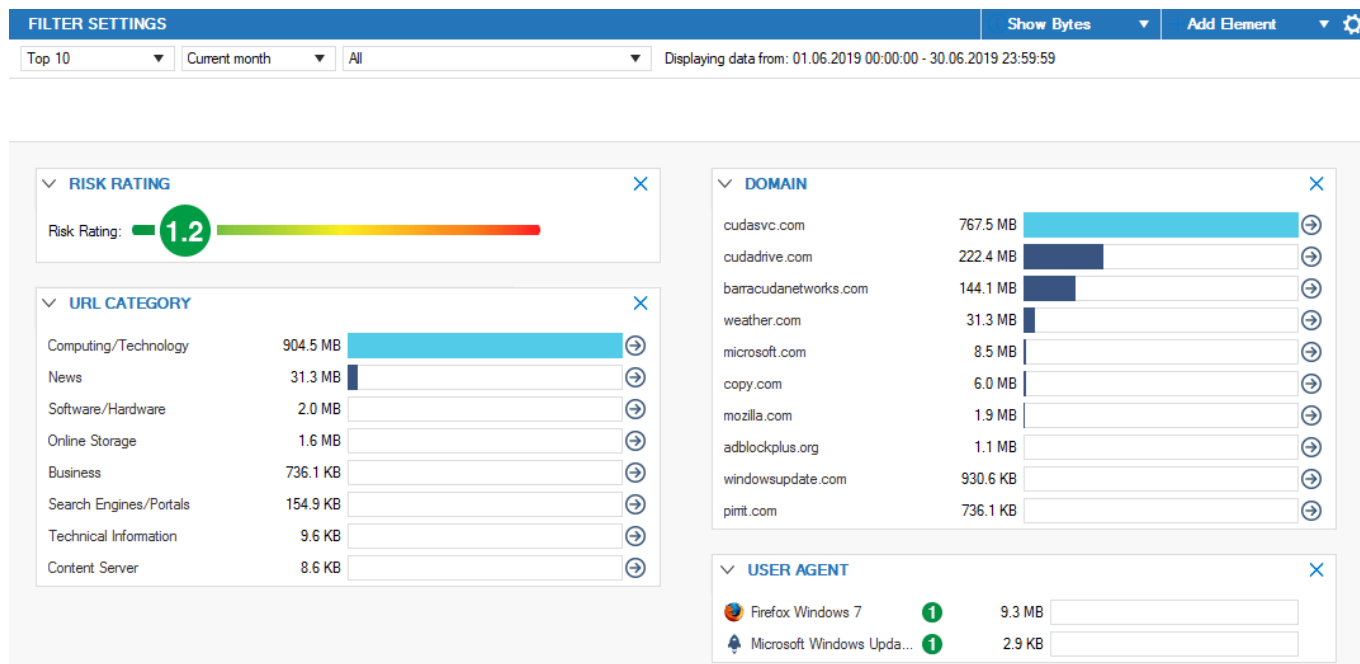

Authenticated User	Policies
Any	URL Filter, File Content, User Agent Malicious Sites, <none>, <none> Schedule: Always URL Filter Matching: Any Protocol: Any Change QoS Band (Fwd): from access rule QoS Band (Reply): QoS Band (Reply)

OK Cancel

8. Click **OK**.
9. Click **Send Changes** and **Activate**.

Firewall Monitor

Go to **FIREWALL > Monitor** and drill down into the **Malicious Sites** category to receive a summary of all clients attempting to access websites in this category.
