

How to Create a Protocol Object

<https://campus.barracuda.com/doc/96026228/>

Internet communication systems are based on defined protocols that reside in the application layer (most common: HTTP, HTTPS, or SMTP) and guarantee that users can visit websites, access encrypted online banking accounts, and send emails through the web. Although Application Control 2.0 works on the application layer and detects applications based on communication patterns, you still want to have full control over generic network communication protocols like IPsec, BGP or SIP. In critical back-end environments (like MSSP), Application Control 2.0 detection based on protocol objects is the right tool to detect, classify, regulate, or even block generic IP-based protocols independent from communication criteria like source and destination network or even protocol.

Create a Protocol Object

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > Firewall > Forwarding Rules**.
2. Click **Lock**.
3. In the left menu, expand **Firewall Objects** and select **Applications**.
4. Create the protocol object by either right-clicking the table and selecting **New > Protocol Object** or using the icons in the top-right area of the rule set.
5. Either search or filter for the protocols to include in the object.
6. Add protocols by either dragging them to the **Protocol Set** section or clicking the plus sign (+) next to their names.
7. If an application consists of more than one component, you can add the parent application to also add the child objects.

Edit Protocol Object: Combine Protocols

Name: Save

Comment:

Select Protocols						
ipsec	Filter	Filter	Filter	Filter	Filter	Filter
Name	App Category	Risk	Properties	Info	Depends on	Req
IPSEC	Tunneling	1	Encrypted, ...	IPSec is used for secure communications via IP b...		5.4.
IPSEC ISAKMP	Tunneling	1	Encrypted, ...	IPSEC-based ISAKMP.		5.4.
IPSEC UDP	Tunneling	1	Encrypted, ...	IPsecUDP is IPsec over UDP.	ISAKMP	5.4.

Protocol Set:

Name	Refe...	Description	Comment
IPSEC	-	1 Tunneling/Network Service - Encrypted, Tun...	IPSec is used for secure communications via IP b...

8. Click **Save**.
9. Click **Send Changes** and **Activate**.
