

How to Create NAT Tables (Translation Maps)

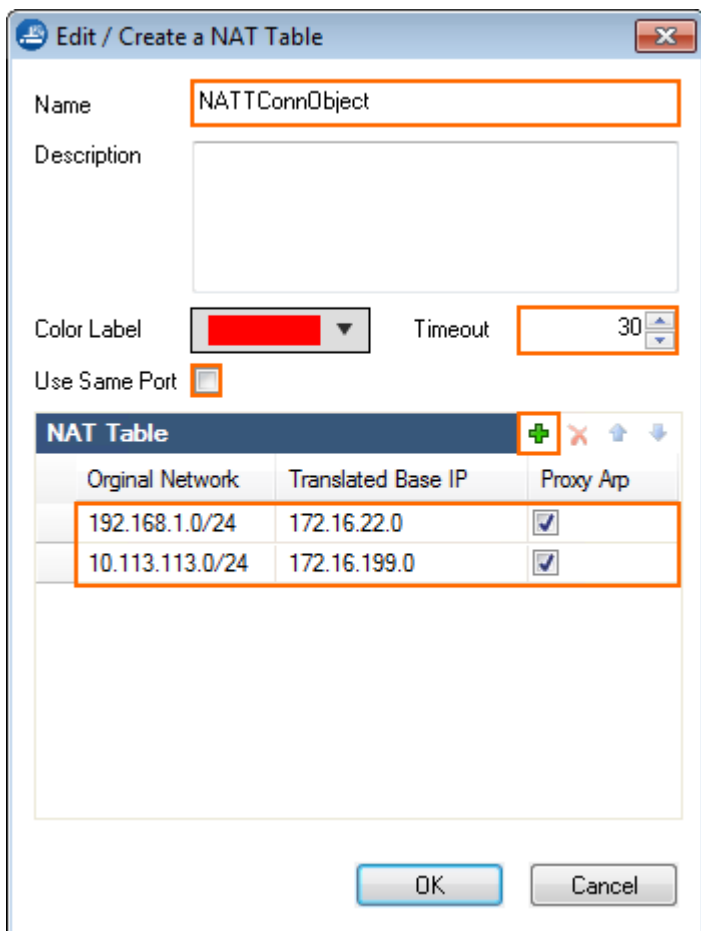

<https://campus.barracuda.com/doc/96026259/>

NAT Tables are an expanded type of source NAT for a network or IP address range. The NAT Tables connection object rewrites the source IP address to a source NAT IP address range. To rewrite both the destination and the source address of the connection, you can choose to use a NAT Table connection object with a MAP access rule. You can enter multiple rewriting maps, which are processed from top to bottom. The first matching rewrite map is used.

Create a NAT Table Connection Object

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > Firewall > Forwarding Rules**.
2. From the left menu, click **Connections**.
3. Click **Lock**.
4. Right-click the table and select **New > NAT Table**.
5. Enter a **Name**.
6. (optional) Select **Use Same Port** to disable port address translation.
7. (optional) Enter the connection **Timeout** in seconds. Default: 30 seconds
8. Click **+** to add an entry to the **NAT Table** list:
 - **Original Network** – Enter the source IP range or network.
 - **Translated Base IP** – Enter the network that you want the source IP address or network to be rewritten to.
 - **Proxy ARP** – Select the check box unless the destination network is connected by a layer 2 bridge to the source network.

Edit / Create a NAT Table

Name: NATConnObject

Description:

Color Label: Timeout: 30

Use Same Port: ☐

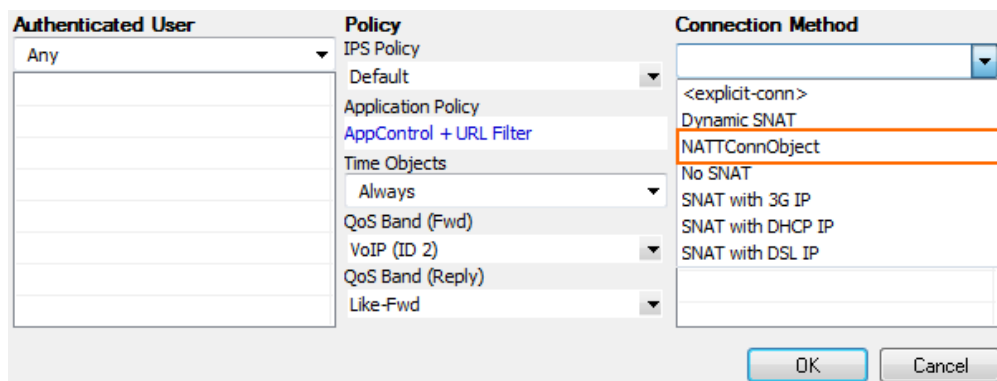

Original Network	Translated Base IP	Proxy Arp
192.168.1.0/24	172.16.22.0	<input checked="" type="checkbox"/>
10.113.113.0/24	172.16.199.0	<input checked="" type="checkbox"/>

OK Cancel

9. (optional) Use the up and down arrows to sort the entries in the **NAT Table**.
10. Click **OK**.
11. Click **Send Changes** and **Activate**.

Apply the NAT Table to an Access Rule

To apply a NAT Table object to an access rule, select the object from the **Connection Method** list in the access rule settings.

Authenticated User	Policy	Connection Method
Any	IPS Policy	
	Default	
	Application Policy	
	AppControl + URL Filter	
	Time Objects	
	Always	
	QoS Band (Fwd)	
	VoIP (ID 2)	
	QoS Band (Reply)	
	Like-Fwd	

OK Cancel
