

# How to Add a New/Clone an Existing CloudGen Firewall to/in the Control Center

#### https://campus.barracuda.com/doc/96026405/

To add a CloudGen Firewall deployed in the public cloud (Azure, AWS, or Google Cloud Platform) to the Control Center, see <u>How to Import an Existing CloudGen Firewall into a Control Center</u>.

Before you deploy a new firewall, you can create and configure all necessary settings on the Control Center. Then, deploy the PAR file to the firewall.

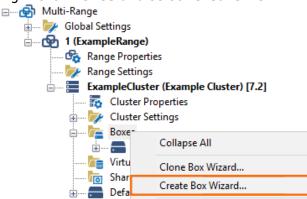

# Step 1. Create a New / Clone an Existing CloudGen Firewall Configuration in the Control Center

#### Step 1. Option 1. Create a New CloudGen Firewall Configuration in the Control Center

Create a box in the Control Center. If you want to add a firewall with similar settings as a box that already exists on your Control Center, you can also clone the configuration.

To create a new CloudGen Firewall configuration:

- 1. Expand the Boxes node (CONFIGURATION > Configuration Tree > Multi-Range > your range > your cluster).
- 2. Right-click Boxes and select Create Box Wizard.

The **Wizard** window opens.

- 3. Enter all settings requested by the Create Box Wizard.
- 4. Click Finish.
- 5. Click Activate.

#### Step 1. Option 2. Clone an Existing CloudGen Firewall Configuration in the Control Center

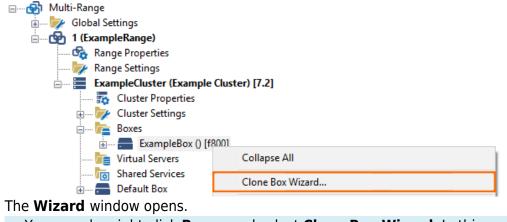

When cloning a box, the following 3 fields in the **Wizard** window are considered:

- Box to clone Example: MySourceBox\_C1\_R1
- Naming Replace From MySourceBox
- Naming Replace To MyClonedBox

The new name of the cloned box will therefore be MyClonedBox\_C1\_R1, because MyClonedBox completely replaces the name MySourceBox in the string MySourceBox\_C1\_R1 in the field **BoxToClone**.

To clone a CloudGen Firewall box, perform the following steps:

- 1. Expand the Boxes node (CONFIGURATION > Configuration Tree > Multi-Range > your range > your cluster).
- 2. Right-click the box you wish to clone and select **Clone Box Wizard**.

You can also right-click **Boxes** and select **Clone Box Wizard**. In this case, you must also select the **Box to clone** in the configuration.

- 3. Enter the name of the new box in the **Naming Replace From** field.
- 4. Enter the name of the new box in the Naming Replace To field.
- 5. In the **Management IP** field, enter the IP address of the new box.

- 6. Adjust all settings according to your requirements.
- 7. Click Finish.
- 8. Click Activate.

# Step 2. (optional) Configure the Remote Management Tunnel

If your firewall cannot directly access the Control Center, configure a remote management tunnel. For more information, see <u>How to Configure a Remote Management Tunnel for a CloudGen Firewall</u>.

# Step 3. Activate the CloudGen Firewall Configuration

Imported firewalls are disabled per default. Disabled CloudGen Firewalls are represented by a gray status icon.

1. Open the **Box Properties** page for the CloudGen Firewall (**CONFIGURATION > Configuration Tree > Multi-Range > your range > your cluster > your CloudGen Firewall**).

- 2. In the left menu, click **Operational**.
- 3. Set **Disable Box** to **no**.
- 4. Click Send Changes and Activate.

The status of the CloudGen Firewall on the **Status Map** (**CONTROL** > **Status Map**) now changes from gray (offline) to red with dashes (unreachable).

# Step 4. Deploy the PAR file to the CloudGen Firewall

Deploy the configuration of the new CloudGen Firewall to the remote CloudGen Firewall.

## Step 4.1 Create the PAR file on the Control Center

- 1. Log into the Control Center.
- 2. Expand the node for the firewall you imported in Step 2.
- 3. Right-click the box name and select **Create PAR file for box**.
- 4. Choose the destination folder and click **Save**.

### Step 4.2. Import the PAR on the CloudGen Firewall

- 1. Log into your firewall.
- 2. Go to CONFIGURATION > Configuration Tree > Multi-Range > your range > your cluster > your CloudGen Firewall.
- 3. Right-click the **Box** node and select **Restore from PAR file**.
- 4. Click **OK.**
- 5. Select the PAR file created in Step 4.1. and click **Open**.
- 6. Click Activate.

#### Step 4.3. Activate the Network Configuration

- 1. Go to **CONTROL > Box**.
- 2. In the left menu, expand the **Network** section.
- 3. Click Activate new network configuration.
- 4. In the dialog window, click **Failsafe**.
- 5. In the left menu, expand **Operating Systems** and click **Firmware Restart**.
- 6. Click **YES**. The firmware of the CloudGen Firewall restarts.

The status of the CloudGen Firewall is now green, red, or yellow. It can take a couple of minutes for the remote firewall to initiate a management tunnel.
