

## How to Move, Copy, and Delete CloudGen Firewalls in the Control Center

<https://campus.barracuda.com/doc/96026418/>

You can freely move, copy, or delete managed CloudGen Firewalls on the Firewall Control Center. When moving or copying systems that link to a repository, make sure the repository is also available from the destination node; otherwise, the links to the repository will be broken and replaced by a copy of the repository configuration.

### Move a CloudGen Firewall Without Links to a Repository

1. In the **Configuration Tree**, navigate to the Barracuda CloudGen Firewall that you want to move.
2. Right-click the Barracuda CloudGen Firewall and select **Lock**.
3. Right-click the Barracuda CloudGen Firewall and select **Move Box**.
4. Select the new location and enter a new name for the Barracuda CloudGen Firewall. The name cannot contain more than 25 characters.
5. Click **OK**. The Barracuda CloudGen Firewall is then moved.

### Moving a CloudGen Firewall With Links to a Repository

When moving a Barracuda CloudGen Firewall configuration with links to a [repository](#), the links may break depending on whether it is a global, range, or cluster repository. The settings on the previously linked configuration pages will be saved, but the pages are no longer linked to the repository.

Repository	Move or Copy to a Different Range	Move or Copy to a Different Cluster
Global	Link remains	Link remains
Range	Link is broken	Link remains
Cluster	Link is broken	Link is broken

### Remove a CloudGen Firewall

A Barracuda CloudGen Firewall that has been removed from the Barracuda Firewall Control Center does not automatically become a stand-alone system. If you want to use the removed Barracuda CloudGen Firewall as a stand-alone system, you must reconfigure it.

1. In the **Configuration Tree**, navigate to the Barracuda CloudGen Firewall that you want to remove.
2. Right-click the Barracuda CloudGen Firewall and select **Lock**.
3. Right-click the Barracuda CloudGen Firewall and select **Remove Box**.
4. Click **Send Changes**.
5. Click **Activate**.

After the Barracuda CloudGen Firewall has been removed, the box entry should disappear from the CC status map with the next configuration update. If the entry stays on the system:

1. At the command line, enter the following commands:

```
$ find /opt/phion/rangetree/configroot/ -name box.dbconf | xargs rm
$ conftool r - rebuild_db
$ conftool r - rebuild_cache
```
2. Restart the CC Rangeconf service.
