

How to Enable the Firewall Audit Log Service

https://campus.barracuda.com/doc/96026558/

The Barracuda CloudGen Firewall generates Audit Log entries for both local and/or forwarding traffic. The Firewall Audit Info viewer is accessible by selecting the **Firewall** tab and clicking the **Audit Log** icon in the ribbon bar. The local Audit Info viewer is available on every Barracuda CloudGen Firewall generating a Firewall Audit log file.

Enable Audit Logs

Activate the generation of Firewall Audit data. From the **Audit Delivery** list, you can select how audit log data is stored or processed:

- Local-DB Store audit data within a local sqlite3 DB.
- Forward-Only Forward natively to an audit collector service.
- Local-DB-And-Forward The combination of both.
- **Send-IPFIX** Hand off data to separate IPFIX exporter.
- Forward-and-Send-IPFIX Combination of forwarding and sending data to an IPFIX exporter.
- Regular Log File Plain ASCII-based log file.
- **Syslog-Proxy** Generate syslog messages.
- Executable Feed into custom executable on stdin.
- Send-UDP-Packet Send via plain UDP stream.

To enable the Firewall Audit Log service:

- 1. Go to CONFIGURATION > Full Configuration > Box > Infrastructure Services > General Firewall Configuration.
- In the left menu, select Audit and Reporting.
- 3. Expand the Configuration Mode menu and select Switch to Advanced View.
- 4. Click Lock.
- 5. In the Log Policy section, enable Generate Audit Log.
- 6. Click Set/Edit next to Audit Log Data.
- From the Audit Delivery drop-down list, select how audit log data should be processed. For example, select Regular Logfile.
- 8. Click OK.
- 9. Click **Send Changes** and **Activate**.

Firewall Audit data is stored locally by default, but may be forwarded to the Barracuda Firewall Control Center or to a dedicated Barracuda CloudGen Firewall running the Firewall Audit Log service for central audit log file collection. For more information, see <u>FW Audit</u>.
