

How to Configure Explicit Groups

<https://campus.barracuda.com/doc/96026644/>

Explicit groups are a way to organize users into groups for authentication schemes that do not provide group information, such as [MSNT](#) or [RSA-ACE](#).

Configure Explicit Groups

1. Go to **CONFIGURATION > Configuration Tree > Box > Infrastructure Services > Authentication Service**.
2. In the left menu, click **Explicit Groups**.
3. Click **Lock**.
4. In the **Explicit Groups** table, click **+** to add a group:
 - **Group Name** – Enter the name of the group.
 - **Login Name** – In this table, add users that belong to the group. Use the following format: user@domain

5. (Optional) In the **External DBFiles** table, add references to the Berkley DB files containing already existing group and user information.
6. Click **Send Changes** and **Activate**.

You can now refer to this explicit user group for authentication.
