

How to Create TLS Inspection Policies

<https://campus.barracuda.com/doc/96766720/>

TLS Inspection decrypts TLS connections so the appliance can allow features, such as Malware Protection and IPS, to scan traffic that would otherwise not be visible to the service. You can use a default TLS Inspection policy profile for your access rules, or you can create an explicit profile to match individual requirements.

TLS Inspection Shared Policy Profiles			
Name	Origin	Refer...	Description
0 GlobSSLInsp	Local	0	

GlobSSLInsp								
TLS Inspection Policy Profile				References				
Name	Description	Action	TLS Inspection ...	Source	Destination	Application	User	URL Filter Match
0 TlsDefault		 Inspect	Default	Private 192.168.0.0/16	Internet 0.0.0.0/0, NOT 10.0.0.0/8, ...	Any	Any	Any

For information on how to customize default policy profiles, see [How to Configure Policy Profiles](#).

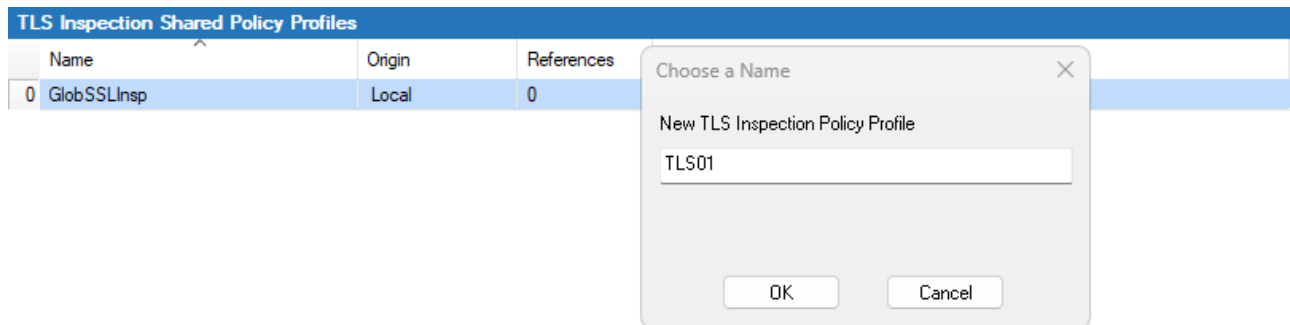

Before You Begin

- Create or upload the server certificate to be used for TLS Inspection. For more information, see [How to Manage Certificates in the Certificate Store](#).

Create a TLS Inspection Policy Profile

Create an explicit TLS Inspection policy profile to match individual requirements.

1. (On the Control Center) Go to **CONFIGURATION > Configuration Tree > Multi-Range > Global Settings > Firewall Objects**.
2. Click **Lock**.
3. In the left menu, expand **Policy Profiles**.
4. Select **TLS Inspection**. The **TLS Inspection Policies** window opens.
5. To add a new policy profile, click the plus icon at the top right of the window, enter a profile name, and click **OK**.

6. Click **Send Changes** and **Activate**.

The policy profile now appears in the **TLS Inspection Shared Policy Profiles** list, and you can create explicit policies for it.

Create an Explicit TLSInspection Policy

1. (On the Control Center) Go to **CONFIGURATION > Configuration Tree > Multi-Range > Global Settings > Firewall Objects**.
2. (On a CloudGen Firewall) Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > Firewall > Forwarding Rules**.
3. Click **Lock**.
4. In the left menu, expand **Policy Profiles**.
5. Select **TLS Inspection**. The **TLS Inspection Policies** window opens.
6. Select the profile you wish to create the policy for. The policy list appears under the corresponding tab in the lower window.
7. To add a new policy, click the plus icon at the top right of the lower window. You can also right-click the list and select **Add Policy**.
8. Specify values for the following:
 - **Name** – Enter a descriptive name for the explicit policy.
 - **Description** – Enter a description for the policy.
 - **Action** – Select either **Inspect** or **Do Not Inspect**.
 - **TLS Policy** – Select either the default or an explicit policy.
 - **Source / Destination IP / Network Criteria** – Select the source and destination network, or select **<Explicit Network>** and enter an IP address/network or a domain that gets resolved to an IP address for the matching.
 - **Application Criteria** – Define the application match condition. Add an application the policy should apply to, or create explicit applications. To open the selection menu, double-click the corresponding field. Selecting applications in the application editor works similarly to the process in the object configuration for the application rule set. For more information, see [How to Create an Application Object](#) and [How to Create a Custom Application Object](#).
 - **Users** – Select the users or groups the policy should apply.
 - **URL Category** – Specify URL categories the policy should apply to.

TLS Inspection

General

Name	TlsDefault
Description	
Action	 Inspect ▼
TLS Policy	Default ▼

Criteria

Source IP/Network Criteria	Any ▼ ...
	0.0.0.0/0
Destination IP/Network Criteria	Any ▼ ...
	0.0.0.0/0
Application Criteria	▼ ...
	Match for any Application
Users	▼ ...
URL Category	▼ ...

9. Click **OK**.

10. Click **Send Changes** and **Activate**.

The policy is now listed in the lower window and can be selected in your forwarding rules. For more information, see the last step in [How to Configure Policy Profiles](#).
