

Wildcard Exclusions APIs

<https://campus.barracuda.com/doc/96771974/>

This setting allows users to set the wildcard exclusions. The request is wrapped inside "wildCardExclusions" block and has two member settings:

- "values" : these are the user-specified wildcard exclusions and it has to be an array of strings
- "keepDefaults": this field specified whether to:

keep all defaults when set to true

remove all defaults when set to false

remove individual defaults when this is an array of strings. Accepted values are:

RecycleBinDir removes '*:\$Recycle.Bin*'

RecyclerDir removes '*:\RECYCLER*'

SystemVolumeInformationDir removes '*:\System Volume Information*'

WindowsDir removes '*:\Windows*'

UserTempDir removes '*:\Users*\AppData\Local\Temp*'

Usage Example

There are multiple combinations of the parameters above, resulting in different outcomes.

Keep all defaults only:

```
"wildCardExclusions": {  
  
  "keepDefaults": true  
  
}
```

Keep specific defaults only:

```
"wildCardExclusions": {
```

```
  "keepDefaults": [
```

```
    "RecycleBinDir"
```

```
  ]
```

```
}
```

Add user wildcard exclusions and keep all defaults:

```
"wildCardExclusions": {
```

```
  "values": [
```

```
    "D:\\",
```

```
    "F:\\MyData\\*.log"
```

```
  ],
```

```
  "keepDefaults": true
```

```
}
```

Add user wildcard exclusions only:

```
"wildCardExclusions": {  
  
  "values": [  
  
    "D:\\",  
  
    "F:\\MyData\\*.log"  
  
  ]  
  
}
```

Note: In this case "keepDefaults" defaults to false. This means that only the user defined exclusions is saved/applied. This is the same as:

```
"wildCardExclusions": {  
  
  "values": [  
  
    "D:\\",  
  
    "F:\\MyData\\*.log"  
  
  ],  
  
  "keepDefaults": false  
  
}
```

Add user wildcard exclusions and keep specific defaults:

```
"wildCardExclusions": {
```

```
"values": [  
  "D:\\",  
  "F:\\MyData\\*.log"  
],  
"keepDefaults": [  
  "RecycleBinDir"  
]  
}
```
