

Validate Path

<https://campus.barracuda.com/doc/96772167/>

This section includes the following topics:

- Input Parameters
- Output Parameters

Input Parameters

The following table provides the parameters and descriptions.

Parameter	Description
diskLocation path	String disk path location.
diskLocation credentials	Optional, in case the path is a network share that requires auth. userName - optional parameter to use for shares requiring auth. password - optional parameter to use for shares requiring auth.

Example

Example for credential based auth on a remote host below. If a local folder is used, the credentials section is not required.

```
{  
  
  "diskLocation": {  
  
    "path": "\\server1\share1\folder1",  
  
    "credentials": {
```

```
"userName": "user1",  
  
"password": "passwordtext"  
  
}  
  
}  
  
}
```

Output Parameters

None when successful, validation errors otherwise:

CreateFolderFailed: general error. Most likely a local volume is read only or cannot be written to due to permissions on the local file system

Network shares only:

- BackupSetActions_NetworkShareInaccessible - network share address could not be reached
- BackupSetActions_NetworkPathNotFound - the network path could not be found
- BackupSetActions_NetworkShareInvalidAuth - username + password combination failed authentication
- BackupSetActions_NetworkShareNoWritePermissions - username and password ok, but no write permissions for the provided username on that share.

Example POST

POST /v2/accounts/test_acc/computers/0000/restore/diskimage/standard/vm/validate/path

Input Parameters

```
{  
  
  "diskLocation": {  
  
    "path": "\\server1\share1\folder1",  
  
    "credentials": {  
  
      "userName": "user1",  
  
      "password": "passwordtext"  
    }  
  }  
}
```

Output Parameters

Response status: 204 No content (for online operation).
