Be sure to read about <u>License Definitions</u> for the Barracuda Email Protection portfolio.

Impersonation Protection is a comprehensive artificial intelligence (AI) solution for real-time spear phishing and cyber fraud defense. It is delivered as a cloud service. Impersonation Protection uses artificial intelligence to protect people, businesses, and brands from spear phishing, impersonation attempts, business email compromise (BEC), and cyber fraud.

The main components of Impersonation Protection include:

- A multi-layer AI engine that detects and blocks spear phishing attacks in real time and identifies which employees are at highest risk of spear phishing
- Ability to detect account takeover attempts and block email attacks launched from compromised accounts.

Deployment has no impact on network performance, email delivery, or user experience. Impersonation Protection connects directly to communications platforms via API, and works alongside existing email security solutions, including native Microsoft 365 or any other email security solutions. Impersonation Protection is available today for Microsoft 365 users.

## **Reporting a Missed Attack**

If an attack email gets through, refer to Reporting a Missed Attack.
