

How to Generate a PDF Report of a Security Scan

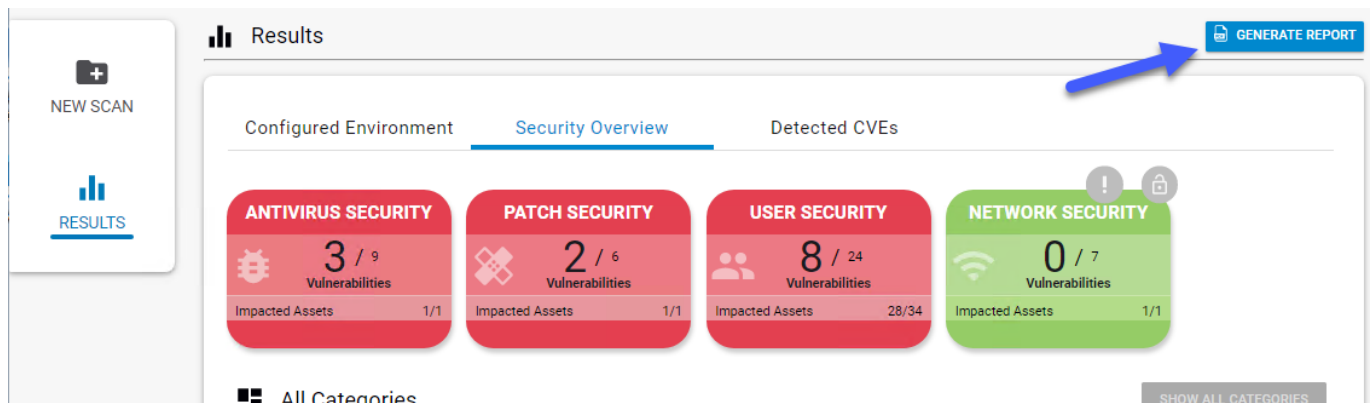

<https://campus.barracuda.com/doc/97520451/>

Before generating a PDF report that you can brand with your company's information and send to your customer, you must first [scan a site for a security assessment](#).

Once you have scanned a site, you can generate a report from the [Results](#) page.

To generate a PDF report of your customer's security scan results, on any tab of the **Results** page, click **Generate Report** on the right side.

When the **Generate Report** dialog box opens, you can customize the report. You can:

- add the name and logo of the customer the report is generated for
- add the name and logo of the company generating the report
- choose whether to include the information of the devices that have been scanned, the IP range that was scanned, the top ten CVEs from the scan, and/or any unknown devices
