

## Import Ninite Pro Scripts

<https://campus.barracuda.com/doc/98217116/>

1. Go to **Automation > Library**.
2. Click **New Script**.
3. Input a title for the script in the Script Name field. This will be the name displayed in the Library.
4. Enter a Version in the **Version** field.
5. Upload the Ninite installer executable in the File field.
6. Select a **Category** for the script under which it will be categorized in the Library.
7. Under Script parameters, select the radio button labeled **Use Command Line Parameters**.
8. Enter the desired command line parameters in the **Default value** field. Example /silent.

For a detailed list of parameters supported by Ninite Pro installers, please reference the following URL:
