## Do Not Reboot options under Patch Management

<https://campus.barracuda.com/doc/98217245/>

This article provides different scenarios for choosing the option of not rebooting after patches are installed.

---

### No users logged on

---

Automatic restart immediately after installation.

### Single user with administrative privileges

---

Restart notification allows the user to initiate the restart or postpone the restart. This notification does not have a countdown timer. The user must initiate the system restart.

### Single user with restart privileges but no other administrative privileges

---

Restart notification allows the user to initiate, but not postpone, the restart. This notification does not have a countdown timer. The user must initiate the system restart.

### Single non-administrator without restart privileges

---

Restart notification does not allow the user to initiate or postpone the restart. This notification does not have a countdown timer. The user must wait for an authorized user to initiate the system restart.

### Administrator while other users are logged on

---

Restart notification does not allow the user to initiate the restart, but it allows the user to postpone the restart. This notification does not have a countdown timer. The user must initiate the system restart.

---

## **Non-administrator with restart privileges while other users are logged on**

---

Restart notification does not allow the user to initiate or postpone the restart. This notification does not have a countdown timer. The user must initiate the system restart.

---

## **Non-administrator without restart privileges while other users are logged on**

---

Restart notification does not allow the user to initiate or postpone the restart. This notification does not have a countdown timer. The user must wait for an authorized user to initiate the system restart.
