

## Incident Response and Creating Policies With Barracuda CloudGen Access

<https://campus.barracuda.com/doc/98217426/>

Barracuda CloudGen Access (CGA) can integrate with Barracuda Incident Response to better protect your users from receiving malicious or suspicious emails.

You can configure Incident Response to work together with CGA on incident remediation. To do so, in your Incident Response account, enable the **Block all user web traffic for domains contained in links** feature (see [User-Reported Emails](#)). This action creates new exceptions in CGA that block web traffic from the domains contained in an incident email (per domains you have added on the **Web Security > Domains** page).

These new CGA exceptions are *Block* rules for *All\_Team* on the **Web Security > Policies** page and will be labeled as having been created by Incident Response. For details about creating policies, see [How to Configure Web Security Policies](#).
