

Integrating with Intronis Backup

<https://campus.barracuda.com/doc/98221481/>

Barracuda Intronis Backup is a software-only BDR solution designed to accelerate the growth of your managed services business. Built specifically for MSPs around a centralized management portal, Intronis Backup enables you to protect, recover, and restore SMB files, folders, emails, applications, and servers — physical or virtual — both locally and in the cloud.

Barracuda RMM provides free deployment of Barracuda Intronis Backup Agent for users with an Intronis Backup license. You can deploy Intronis Backup Agent to devices managed by Barracuda RMM from within Service Center.

On the Intronis Backup Device Report, you can view an overview of deployment status for any site's devices. You can see the following for each device:

- Device Name
- The Site the device belongs to
- The ECHOpatform customer account
- IBU Computer ID
- Status of deployment
- Status of the agent
- Agent version

The Intronis Backup Agent deployed through this process will not reflect any branding you have set up in ECHOpatform.

Intronis Backup requires an additional license. Contact your Barracuda sales representative.
