Barracuda XDR Release Notes — February 2023

https://campus.barracuda.com/doc/98222852/

Enhancements to User Management

The User Management page now supports the ability to show only the users associated with the selected account list of users instead of all users only.

New statistics, such as total Users and Admins, have been added to the page.

Improvements to the user creation workflow to better match other workflows in the dashboard.

Resend end-user Terms & Conditions emails

Partners can now resend the Terms & Conditions at the touch of a button, without having to contact Barracuda.

Sophos Central integration is now self-service

Users can now integrate Sophos Central instead of having to contact Barracuda's Enablement team for the configuration.

Updated logos

Logos on the dashboard and in reports now reflect Barracuda and Barracuda XDR instead of Barracuda MSP.

Better labeling when a SentinelOne Agent is disabled by the system

It is now easier to identify when a SentinelOne agent is disabled by the system.

Improvements to the ConnectWise Integration page

Improvements to the integration page make it easier to integrate ConnectWise.

Endpoint USB Blocking

Blocking USB endpoints prevents USB devices from being "added" to a machine. The configuration is set at the Group level.

This feature is available for Managed Endpoint Security customers.
