Setting up the Citrix ADC Integration Collector

https://campus.barracuda.com/doc/99621450/

This setup is for the XDR Collector only. If you are using a physical or virtual sensor, refer to Integrating Citrix Netscaler Application Delivery Controller (ADC).

To set up the Citrix ADC Integration Collector, do the following steps, below:

1. Enable the Citrix ADC Collector integration.
2. Install the XDR Collector.
3. Firewall Configuration.
4. Open port on the XDR Collector Host.

The install command is unique to the current selected account and should only be run on systems within that environment.

Enable Citrix ADC Collector

1. In Barracuda XDR Dashboard, navigate to **Administration** > **Integrations**.
2. On the **Citrix ADC Collector** card, click **Setup**.
3. Select the **Enable** check box.
4. Click **Save**.

Install the XDR Collector

When collecting logs from one or more integrated data sources, always set up the XDR Collector on a dedicated host server. Don't use an existing server because the amount of data produced by logs can impact critical infrastructure.

- If you haven't already set up the Barracuda XDR Elastic Collector, do one of the following:
  - Setting up the Barracuda XDR Elastic Collector for Windows
  - Setting up the Barracuda XDR Elastic Collector for Linux

Firewall Configuration

- To add a Syslog server to the Citrix ADC Firewall follow the steps in the Citrix ADC Firewall Documentation

- When entering the necessary information for each syslog server that is added, make sure that the port is pointing to 9205, not to the default port that is mentioned in the documentation.

Open port on the XDR Collector Host

If you have a firewall protecting your collector, ensure that it allows incoming traffic on the UDP port.

Here are some examples of how to do that on commonly used firewalls.

Linux Iptables

```
sudo iptables -A INPUT -p udp --dport 9205 -j ACCEPT
```

Linux firewalld

```
sudo firewall-cmd --add-port=9205/udp
```

Windows

```
netsh advfirewall firewall add rule name="Citrix Events" dir=in action=allow
protocol=UDP localport=9205
```
