

Setting up SonicWALL Firewall Collector

https://campus.barracuda.com/doc/99621490/

This setup is for the XDR Collector only. If you are using a physical or virtual sensor, refer to Integrating SonicWALL Firewall.

To set up the SonicWALL Firewall Collector, follow the procedures below:

- Enable the SonicWALL Firewall Collector integration
- Install the XDR Collector
- Configure the Firewall
- Open the port on the XDR Collector Host

Enable SonicWALL Firewall

- 1. In Barracuda XDR Dashboard, navigate to Administration > Integrations.
- 2. On the SonicWALL Firewall Collector card, click Setup.

	Integration: SonicWall Firewall Collector	Help 🖄
	Setup Instructions	
	Enabled	
	Save	
4.	Click Save.	

Install the XDR Collector

When collecting logs from one or more integrated data sources, always set up the XDR Collector on a dedicated host server. Don't use an existing server because the amount of data produced by logs can impact critical infrastructure.

- If you haven't already set up the XDR Collector, do one of the following:
 - Setting up the XDR Collector for Windows
 - <u>Setting up the XDR Collector for Linux</u>

Configure the Firewall

- 1. In SonicWALL Firewall, go to **Device** > **Log** > **Syslog**.
- 2. Click Syslog Servers tab.
- 3. Click Add.

The Add Syslog Server dialog appears.

Add Syslog Server

SYSLOG SERVER	
Event Profile	0
Name or IP Adress	Select an Address Obi 💌
Port	514
Server Type	Syslog Server 💌
Syslog Format	Default
Syslog Facility	Local use 0 🛛 🗸
Syslog ID	firewall
Enable Event Rate Limiting	
Maximum Events Per Second	1000
Enable Data Rate Limiting	
Maximum Bytes Per Second	10000000
BIND TO VPN TUNNEL AND CREATE NETWORK MONITOR POLICY IN NDPP MOE	DE
Local Interface	=Select an Interface=
Outbound Interface	Select a Tunnel Interfa 💌

- Specify the Event Profile for this server. The minimum value is 0 (1 group), the maximum is 23 (24 groups), and the default is 0. Each group can have a maximum of 7 Syslog servers. For GMS, the Event Profile must be 0.
- Select the Syslog server Name or IP address. Messages from the firewall are then sent to the servers.
- 6. In the **Port Number** field, type 9204.
- 7. Select the **Syslog Format**.

The default is **Default**. For **GMS**, the Syslog format must be **Default**.

- Select the Syslog Facility. The default is Local Use 0. For GMS, the Syslog format must be Local Use 0.
- 9. Type the **Syslog ID**.

The default ID is firewall.

- 10. Optionally, to limit events logged and therefore, prevent the internal or external logging mechanism from being overwhelmed by log events, select **Enable Event Rate Limiting**. Event rate limiting is applied regardless of Log Priority of individual events. Specify the maximum number of events in the Maximum Events Per Second field; the minimum number is 0, the maximum is 1000, and the default is 1000 per second.
- 11. Optionally, to limit events logged and therefore, prevent the internal or external logging mechanism from being overwhelmed by log events, select **Enable Data Rate Limiting**. Data rate limiting is applied regardless of Log Priority of individual events. Specify the maximum number of bytes in the Maximum Bytes Per Second field; the minimum is number is 0, the maximum is 1000000000, and the default is 100000000 bytes per second. This control limits data logged to prevent the internal or external logging mechanism from being overwhelmed by log events.
- 12. To bind to a VPN tunnel and create a network monitor policy in NDPP mode:
 - 1. Optionally, choose a Local Interface.
 - 2. Optionally, choose an **Outbound Interface**.
- 13. Click Add.

For more information, see the <u>SonicWALL Firewall Documentation</u>.

Open port on the XDR Collector Host

Ensure incoming traffic is allowed on UDP port 9204.

Linux

sudo ufw allow 9204/udp

Windows

netsh advfirewall firewall add rule name="SonicWALL Firewall Events" dir=in action=allow protocol=UDP localport=9204

Barracuda XDR
