

# Click Thinking Newsletter

January 2019

Working from home is a fact of life for many. In this month's Click Thinking bundle we look at ways to protect yourself and your company from cyberthreats while conducting business on the home front.

## More Content in the New Year

We know you have ambitious goals for 2019—and to help you achieve them, we've developed a host of new templates, landing pages and more for you to utilize. You can find them all in our Content Center Marketplace™, your one-stop shop for all your campaign-creating tools. If you need help finding anything or want help setting up your campaign, please contact support.

## Enhancements and Updates

Campaign planning is getting easier thanks to the integration of LDAP and SETP address books. Now, the process of creating an address book can be automated.

We would also like to remind you that REST API, launched late in 2018, is making it easier to retrieve and integrate data with other systems. If you have questions, please consult support.

## Modules in Many Languages

We strive to create content in the languages you need in your markets. With this in mind, we've developed an extensive catalog of training modules in a variety of languages, including Spanish, Chinese, Malaysian and many more. What's more, a variety of translated phishing emails and landing pages are also available. For a comprehensive list, visit the Content Center Marketplace.

## Training Modules Give You Flexibility

If you haven't perused the training module catalog lately, we invite you to get reacquainted. Each training module comes with or without a quiz and can be run on your own LMS or on PhishLine's.

All are created in an upbeat, easy-to-follow animated format that makes training fun and interesting. With dozens of modules to choose from, and more on the way, you can customize a curriculum that meets your specific training needs.

### To access the Click Thinking bundle

Log into the Phishline tool, click the banner at the bottom of the dashboard and download the bundle to receive a zipped file of materials.
