

BARRACUDA XDR

Exporting a List of Exclusions, Blocklist and Device Control Settings

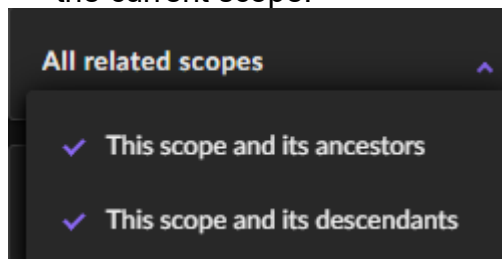

If you are migrating existing SentinelOne agents to the Barracuda XDR's console, you may wish to export the current list exclusions and blocklist items. The SOC can easily import the lists to the new account/site to ensure for a smooth transition.

EXPORTING A LIST OF EXCLUSIONS

1. At the top left of the Console, click  and select a scope.
2. In the **Sentinels** toolbar, click **Exclusions**.

3. Select one of the following scopes:
 - **This scope and its ancestors** - All higher scopes directly related to the current scope.
 - **This scope and its descendants** - All lower scopes directly related to the current scope.

4. Optionally, select filters to filter the results.
5. On the right above the table, click **Export**.

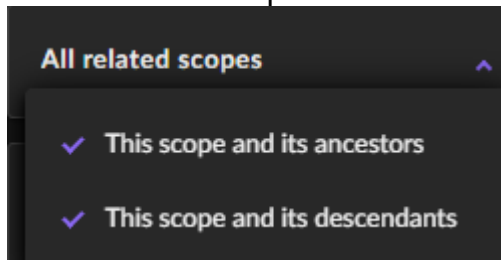

The file downloads to the default **Downloads** folder on the computer of the Management Console.

EXPORTING BLOCKLIST ITEMS

1. At the top left of the Console, click  and select a scope.
2. In the **Sentinels** toolbar, click **Blocklist**.

3. Select which scopes to see:
 - a. **This scope and its ancestors** - All higher scopes directly related to the current scope.
 - b. **This scope and its descendants** - All lower scopes directly related to the current scope.

4. Optionally, select filters to filter the results.
5. On the right above the table, click **Export**.
6. The file downloads to the default **Downloads** folder on the computer of the Management Console.

EXPORTING DEVICE CONTROL SETTINGS

1. At the top left of the Console, click  and select a scope.
2. In the **Sentinels** toolbar, click **Device Control**.

3. On the right above the table, click **Export**.
4. The file downloads to the default **Downloads** folder on the computer of the Management Console.
